

---

**TECHNICAL SKILLS**

---

**Languages:** JavaScript, Python3, HTML/CSS, SQL, MongoDBQL, Bash, Go**Libraries/Frameworks:** Node.js, React.js, Next.js, Express.js, Plotly, pandas, NumPy, scikit-learn**Tools & Platforms:** Git, Unix/Linux command line, Nginx, Netlify, Docker, AWS (Lambda, S3, SAM, etc.)**Management + Design:** Jira, Figma, Whimsical, Trello, Azure DevOps

---

**PROFESSIONAL EXPERIENCE**

---

**Digital Infuzion**

Remote

Software Engineer

Dec 2022 – Present

- **Flu Hub:** Requirement: Build a new National Institutes of Health public website in four months that provides an informational resource portal for influenza researchers Actions: (1) Created 8 pages utilizing React and Next.js with MUI (2) Controlled flow of information from Strapi.js CMS API and client app (3) Crafted Dockerfiles and CloudFormation SAM templates for deployments (4) Engineered reactive, styled components responsive to user input (5) Built AG Grid data table page and filtering logic
- **Natural Language Processing:** Requirement: Create 3D scatter plots from Excel file data after performing NLP. Actions: (1) Read input from columns and vectorized data using bag-of-words and TF-IDF (2) Performed reduction on vectors utilizing scikit-learn PCA and UMAP (3) Created plots and S3 website from HTML output
- **Automation:** Requirement: Determine how to implement contractually obligated assessment Actions: (1) Evaluated resource and monetary costs of previous implementation (2) Designed a software program to automate collecting information pertinent to the assessment and generate a report (3) Implemented design utilizing Node.js, Puppeteer, ANDI, and PDFKit (4) Assisted team members consuming output
- **Parallel Coordinates Visualization:** Requirement: Build a parallel coordinates graph from data in 3 CSV files. Actions: (1) Cleaned, processed, and combined data (2) Research HiPlot and built a React website to load and display the data as an interactive parallel coordinates graph (3) Deployed to S3 for stakeholder engagement

**Competitive Solutions**

Remote

Software Engineer

Apr 2021 – Dec 2022

- **Nano ID:** Requirement: Provide shorter IDs on the user interface than the 26 character MongoDB default Actions: (1) Researched libraries (2) Imported nanoid library on the back end and integrated it (3) Wrote a Node.js script to add nanoids to existing data (4) Updated API and React components
- **Document Upload:** Requirement(s): Add a feature to allow admin to attach documents to regular user data. Actions: (1) Created AWS S3 infrastructure to store files (2) Built Express.js API to receive data and perform S3 uploads (3) Developed React components to handle uploading files (4) Engineered additional business logic to store document metadata and send emails.
- **Data Sharing with Partner Organization:** Built Lambda functions and S3 buckets to exchange data

**Project Manager**

Mar 2019 – Apr 2021

- Collaborated with engineers and stakeholders to ensure business goals translated into useful product features and effective outcomes
- Defined user stories, created mockups, wireframes, sketches, and storyboards to aid development.
